ABSTRACT OF THE DISCLOSURE

A method is provided for facilitating transactions involving a plurality of performing artists and a plurality of talent representative entities. Each of the performing artists is associated with one of the talent representative entities. The method includes storing on a machine-readable medium a plurality of talent files. Each of the talent files is associated with one of the plurality of performing artists and contains talent information for the one of the plurality of the performing artists. The method further includes enabling access to the stored talent file of the one of the plurality of performing artists by the one of the talent representative entities associated with the one of the plurality of performing artists, and denying access to the talent file of the one of the plurality of performing artists by the talent representative entities other than the one of the talent representative entities associated with the one of the plurality of performing artists. A related system also is provided. According to another aspect, a guest pass is provided so that unregistered guests may selectively access the talent file information.
